Two-factor authentication

Enabled

Because of your contributions on GitHub, two-factor authentication is required for your account. Thank you for helping keep the ecosystem safe! [Learn more about our two-factor authentication initiative.](#)

Two-factor authentication adds an additional layer of security to your account by requiring more than just a password to sign in. [Learn more about two-factor authentication.](#)

Preferred 2FA method

Set your preferred method to use for two-factor authentication when signing into GitHub.

SMS/Text message

Two-factor methods

 Please configure another 2FA method to reduce your risk of permanent account lockout. If you use SMS for 2FA, we strongly recommend against SMS as it is prone to fraud and delivery may be unreliable depending on your region.

Authenticator app

Use an authentication app or browser extension to generate one-time codes.

Add

SMS/Text message

Configured

Less secure

Edit

We strongly advise against using SMS because it is susceptible to interception, does not provide resistance against phishing attacks, and deliverability can be unreliable. Instead, we recommend configuring an authenticator app and disabling SMS as a 2FA method. You will receive one-time codes at this phone number: +1 XXXXXX1430. 

Security keys

Security keys are webauthn credentials that can only be used as a second factor of authentication.

Edit

GitHub Mobile

GitHub Mobile can be used for two-factor authentication by installing the GitHub Mobile app and signing in to your account.
