

Why is the chronos password different from the root password?

Asked 3 years, 7 months ago Modified 3 years, 7 months ago Viewed 3k times

- My device is a Samsung Chromebook 4.
- Most of the answers I find are confusing `chronos` and `root` . using the terminal `Ctrl` + `Alt` + `F2` (right facing arrow) you will be prompted to set a password for `chronos` (dev pw) by entering
- ```
user: chronos
pw: test0000.
```
- Followed by the command `chromeos-setdevpasswd` . However, that is not specifically the root password. If you enter `user: root` there is a completely different password that I have been unable to obtain from online searches.

`passwords` `root`

Welcome SU @NOX-3N :) Your request isn't easy to understand. It will be good if you can edit it to make it a bit more clear. However, it's like you are referring two distinct account, `chronos` and `root` and you cannot modify this later as standard user. – [gildux](#) Feb 6, 2023 at 1:01
