Android's **adb** standalone build with cmake, support Linux (x86-64, arm64), Windows (32bit) and macOS! It's recommend to develop **adb** with clion/vscode which's remote development is so usefull!

Overview

build adb target for Linux(X64, arm64)

build adb target for windows(only 32-bit supported!)

Introduction - mingw-w64

Mingw-w64 is a collection of header files, import libraries, libraries and tools that, when combined with a compiler toolchain, such as GCC or LLVM, provides a complete development environment for building native Windows applications and libraries. Mingw-w64 is an advancement of the original mingw.org...

adb command not found in linux environment - Stack Overflow

Thus, which **adb** would resolve correctly, but trying to run it would fail with **adb**: command not found. The very helpful guys at #android-dev pointed me to the solution, namely that the 32 bit libraries hadn't been installed. On my previous computers, this had probably been pulled in as a dependency for...

Pre-built Toolchains - mingw-w64

Pre-built Toolchains While mingw-w64 provides the core Windows headers and libraries needed for Windows development, it's not very useful on its own. Most users should install a pre-built toolchain that combines mingw-w64 with a compiler (like GCC with binutils, or LLVM/Clang) and other essential build...
