X-plore

X-plore is a file manager for mobile phones, with wide range of functions on the file system of your mobile device.

Our favorite app

X-plore is amazing app for Android, used by millions of users.

A file manager with many functions to offer.

Use it to connect to your cloud servers. Manage local files on device.

Watch photos, listen to music, play video and movies.

Connect to servers over FTP or SSH.

And much more.

[Read manual \(/docs/xplore\)](/docs/xplore)

X-plore for Symbian

In past we had also version for Symbian

[Click to learn more](#)

X-plore can be used for free.

But it takes enormous time and effort to make app that works properly and has useful functions, so some advanced functions require payment.

Please consider to support X-plore by purchasing virtual beer or cake from inside application. Thank you!

Features

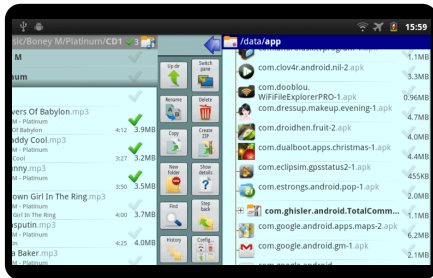

- **Dual-pane** tree view
- **Root** (</docs/xplore/root>) access (on a rooted device), also allowing changes to read-only files
- **Disk Map** (</docs/xplore/disk-map>) – see which files consume most space on your disk *)
- **FTP, FTPS, LAN** (SMB/Samba), **DLNA/UPnP** servers
- Cloud storage access: **Google Drive, OneDrive, Dropbox, Box, Webdav** and others
- **SSH File Transfer** (</docs/xplore/ssh>) (**SFTP**) and **SSH Shell** *)
- **Application manager**

- **USB OTG** (/docs/xplore/usb-otg)
- **WiFi file sharing** (/docs/xplore/wifi-share) ^{*)}
- **Access from a PC web browser** (/docs/xplore/wifi-share/in-web) ^{*)}
- **Music player** (/docs/xplore/music-player) ^{*)}
- **SQLite database** explorer (files with .db extension)
- Seamless work with **Zip** (as with normal folder)
- **Favorite** folders displayable in root
- **Built-in viewers** for images, audio, text
- **Video player** with subtitles ^{*)}
- **Hex** viewer
- Fast **Image viewer** (/docs/xplore/image-viewer) with zoom and slide to previous/next images in folder
- **PDF viewer** (/docs/xplore/pdf-viewer) (on Android 5 and higher)
- **Thumbnails** for images and video as well as for various file types (depending on associated application)
- Ability to clear **default application** (/docs/xplore/defaults) handlers
- **Multi-selection** (/docs/xplore/multi-selection) – always available, yet not disturbing
- **Recycle bin** (/docs/xplore/trash)
- **Search** files in folders (also in archives or in search results)
- View APK files as ZIP
- **Share** – send files by Bluetooth, email, or other way supported by device
- **Configurable buttons** and key **shortcuts**
- **Hide** folders that you don't want to see
- **Vault** (/docs/xplore/vault) for encrypting files

Button configuration

Highlighted functions

Dual-pane view

X-plore is a dual-pane explorer, which means that there are two folders shown at same time, and common operation such as copying files (/docs/xplore/copying) are done from one pane to another. Traditional copy/paste system is also available.

And X-plore shows folder hierarchy in a tree view. This offers clear orientation on where in file system you currently are, and fast switching to other location.

Currently selected folder and files are highlighted, while other folders/files have slightly darker background.

Root access

You may explore internals of the device, and if you're power user and have your device rooted, you can make changes to system data – backup files, remove unwanted applications, etc.

Disk Map

This is overview of disk and shows folders and files sorted by their size. It's suitable for finding space hogs and seeing what consumes most space.

Support

About

More information on X-plore Documentation (</docs/xplore/disk-map>).

FTP and FTPS servers

Access to FTP and FTPS (secure FTP) servers is supported.

Multiple servers may be configured. All standard file operations can be done on FTP server.

LAN servers

X-plore can display shared folders on other computers in LAN (local area network).

The system is also called SMB or Microsoft Windows Network, and can access shared folders on computers connected to LAN, or even remote server if it supports SMB protocol.

X-plore can search for available servers, edit and save settings, or manually add server.

It's also possible to omit username or password (for security reason) and enter these on demand during connecting to server.

DLNA/UPnP

X-plore can show DLNA devices on LAN. X-plore shows only DLNA content providers, that is devices that allow browsing files and work with them.

Cloud storage

X-plore can access various web storage servers, and access their files. You need to have account in supported web cloud service, then you can access your files stored online through X-plore.

SSH File Transfer (SFTP) and Shell

X-plore allows to connect to remote server over SSH protocol (</docs/xplore/ssh>). Supported is file transfer over SFTP protocol, and terminal shell emulation.

Now you can control remote server by giving it commands directly from inside X-plore!

Application manager

Simple application manager, allowing to:

- Open application
- Copy or send application
- Uninstall
- View app system info
- View app on Google Play Store
- Open app's APK file as ZIP

Installed apps are shown as normal entries, system apps are shown as hidden entries.

WiFi file sharing

Access files on your Android device from other Android devices on the LAN.

Read more how it works here (</docs/xplore/wifi-share>).

Browsing from a PC web browser

You can access files on your Android device from your desktop PC using a web browser.

X-plore runs in web browser and communicates with X-plore on the device over WiFi.

You can view, change or upload files from your PC.

Read more how it works here (</docs/xplore/wifi-share/in-web>).
