APK & AAB ANALYSIS

APK Analyzer Online

Break down an APK the way Android Studio's APK Analyzer does: DEX and method counts, resources, native libraries, and total size.

APK Analyzer Online is part of APKLint, an online toolkit for inspecting Android APK files. Break down an APK the way Android Studio's APK Analyzer does: DEX and method counts, resources, native libraries, and total size. Upload an APK in your browser to view the relevant details; results reflect what the file itself exposes.

ANALYZE · APK ANALYZER ONLINE

Analyze

Done.

APK analyzed: com.ucampaignapp.americafirst v2.3.0 — 1 high-severity issue and 6 warnings.

ERROR **Exported content provider without permission**

Content provider "com.facebook.FacebookContentProvider" is exported and has no android:permission. This can expose your app's data to any other app. Set android:exported="false", or guard it with read/write permissions.

WARN **Exported activity without permission**

<activity> "com.facebook.CustomTabActivity" is exported (exported="true", or it has an intent-filter) and has no android:permission, so any app can trigger it. Add a permission, or set exported="false" if it shouldn't be public.

WARN **Exported receiver without permission**

<receiver> "io.branch.referral.InstallListener" is exported (exported="true", or it has an intent-filter) and has no android:permission, so any app can trigger it. Add a permission, or set exported="false" if it shouldn't be public.

WARN **Exported receiver without permission**

<receiver> "com.phunware.engagement.internal.receiver.RebootReceiver" is exported (exported="true", or it has an intent-filter) and has no android:permission, so any app can trigger it. Add a permission, or set exported="false" if it shouldn't be public.

WARN **Exported receiver without permission**

<receiver>
"com.phunware.engagement.internal.receiver.SignificantLocationUpdateReceiver" is exported (exported="true", or it has an intent-filter) and has no android:permission, so any app can trigger it. Add a permission, or set exported="false" if it shouldn't be public.

WARN **High-risk permission: ACCESS_BACKGROUND_LOCATION**

android.permission.ACCESS_BACKGROUND_LOCATION is a sensitive permission Google Play scrutinizes closely. Make sure you have a genuine, declared use and complete any required Play Console declaration — otherwise it can get the app rejected.

WARN **targetSdkVersion is below Google Play's API 35 target rule (reviewed 2026-06-27)**

targetSdkVersion is 28. As of 2026-06-27, Google Play required new apps and

updates to target at least API 35 (Android 15) — Wear OS, Android TV, and Automotive have separate timelines. Play requirements change over time, so verify the current target-API rule in the Play Console before release. A lower target also misses newer security and privacy defaults.

INFO App

Trump 2020 · package com.ucampaignapp.americafirst

INFO Version

versionName 2.3.0 (versionCode 302070)

INFO 14 permission(s) requested

- android.permission.ACCESS_BACKGROUND_LOCATION
- android.permission.ACCESS_COARSE_LOCATION
- android.permission.ACCESS_FINE_LOCATION
- android.permission.ACCESS_NETWORK_STATE
- android.permission.ACCESS_WIFI_STATE
- android.permission.INTERNET
- android.permission.READ_CONTACTS
- android.permission.READ_EXTERNAL_STORAGE
- android.permission.READ_PHONE_STATE
- android.permission.RECEIVE_BOOT_COMPLETED
- android.permission.WAKE_LOCK
- android.permission.WRITE_EXTERNAL_STORAGE
- com.google.android.c2dm.permission.RECEIVE
- com.google.android.finsky.permission.BIND_GET_INSTALL_REFERRER_SERVICE

INFO 7 of them are runtime ("dangerous") permissions

ACCESS_BACKGROUND_LOCATION, ACCESS_COARSE_LOCATION, ACCESS_FINE_LOCATION, READ_CONTACTS, READ_EXTERNAL_STORAGE, READ_PHONE_STATE, WRITE_EXTERNAL_STORAGE

INFO Components

15 activities, 17 services, 8 receivers, 6 providers.

INFO DEX classes & methods

10,313 classes, 69,253 methods (total methods exceed the classic 65,536 single-DEX limit, so multidex is in use).

INFO Network security config present

A network security config is referenced (@7F140001). Good — confirm it disables cleartext and limits trusted CAs as you intend (you can paste it into the Network Security Config checker).

INFO Launcher activity is exported (expected)

<activity>

"com.donaldjtrump.android.presentation.feature.onboarding.LaunchActivity" is your launcher entry point, so it is meant to be exported. No action needed — this

is normal for the activity that opens from the home screen.

INFO receiver relies on default exported

<receiver>

"com.phunware.engagement.internal.receiver.SignificantLocationUpdateReceiver" has an intent-filter but doesn't declare android:exported. Android 12+ (targetSdk 31+) requires it to be explicit — set it true or false.

INFO 7 runtime permission(s) requested

The app requests runtime ("dangerous") permissions:

ACCESS_BACKGROUND_LOCATION, ACCESS_COARSE_LOCATION, ACCESS_FINE_LOCATION, READ_CONTACTS, READ_EXTERNAL_STORAGE, READ_PHONE_STATE, WRITE_EXTERNAL_STORAGE. Each prompts the user and should map to a real feature — remove any you don't need.

INFO minSdkVersion

minSdkVersion is 23. That's a reasonable floor for a modern app.

INFO Signing certificate

Signed with scheme(s): v1, v2, v3.

Deleted after your scan. Files you upload are processed on our servers over an encrypted connection, then removed by the next hourly cleanup after analysis finishes (long scans are protected while they run). We never share them, and need no account.

About APK Analyzer Online

Break down an APK the way Android Studio's APK Analyzer does: DEX and method counts, resources, native libraries, and total size.

APK Analyzer Online is part of APKLint's apk & aab analysis toolkit — Unpack, inspect, and break down Android packages. It's free to use and needs no account.

Your privacy is the default: files you upload are processed on our servers over an encrypted connection and permanently deleted by a scheduled hourly cleanup after analysis finishes, and never shared.

What APK Analyzer Online checks

- ✓ App label, package, versionName/versionCode
- ✓ Full permission list with dangerous ones flagged
- ✓ Activity / service / receiver / provider counts
- ✓ DEX class & method counts, signing details, and a size breakdown with largest files

Good to know: This is the broad overview. For a single focus, use the size, signing, or release-readiness tools.

When to use APK Analyzer Online

Best for

A deep, Android-Studio-style teardown of a release APK when you want the full picture: DEX and method counts, resource tables, the manifest, native ABIs, and package identity in one view.

Not the right tool for

Overkill if you only need the signing certificate (use APK Signature Checker) or only the size breakdown (use APK Size Analyzer).

What you get back

Method/field counts per DEX, resource and asset inventory, declared components and permissions, min/target/compile SDK, and signing summary.

How it differs from related APKLint tools

Where APK Checker is a quick go/no-go glance and APK Scanner lists raw contents, APK Analyzer is the most detailed structural read, closest to Android Studio's own APK Analyzer.

Limitations

It describes structure and metadata; it is not a malware verdict or a security audit. For those use the Malware Scanner or Security Scanner.

How to use APK Analyzer Online

- 1 Choose your APK file** — Drop an .apk file onto the page, or click to select it from your device.
- 2 Send securely** — The file is uploaded over an encrypted connection to our analysis servers.
- 3 Read your report** — APKLint unpacks and inspects the package and lays out the results on screen.
- 4 Your file is removed** — It's deleted by an hourly cleanup job after analysis finishes.

Why use APKLint

Always free

Every tool is free with no login and no paywall. Reasonable file and input limits keep the free service stable.

No on-page ad banners

A clean, focused interface with no third-party ad banners cluttering your results.

Privacy-first

Files you upload are deleted by a scheduled hourly cleanup after analysis finishes, and never shared.

Open-source engines

Built on androguard for APK parsing and manifest/certificate analysis.

No sign-up

Start immediately — no account, login, or email required.

Works anywhere

Runs in any modern browser, on desktop or mobile.

Frequently asked questions

What does APK Analyzer Online do?

Break down an APK the way Android Studio's APK Analyzer does: DEX and method counts, resources, native libraries, and total size.

How is this different from the other APK tools?

APK Analyzer is the all-in-one view. APK Checker focuses on release-readiness, APK Scanner on risk signals, the Size Analyzer on size, and the signing tools on the certificate.

Is it free to use?

Yes. Every tool on APKLint is completely free, with no sign-up and no account.

How is my data handled?

Your uploaded file and its result are processed on our servers over an encrypted connection, then removed by the next hourly cleanup after analysis finishes. We never share them.

What files can I send?

An Android APK — a .apk file — up to 1 GB.

**APKLint**

APKLint is a free, no-signup toolkit for Android developers: decompile and analyze APK and AAB files, audit your manifest, run security checks, and prep for Google Play. Files you upload are deleted by an hourly cleanup after analysis finishes. We show no third-party ad banners and never ask for an account. A Takenick Innovation product.
