APK Malware Risk Analyzer

Scan an APK for malware indicators and risky behavior using open-source engines — an honest risk read, not a single-vendor verdict.

APK Malware Risk Analyzer is part of APKLint, an online toolkit for inspecting Android APK files. Scan an APK for malware indicators and risky behavior using open-source engines — an honest risk read, not a single-vendor verdict. Upload an APK in your browser to view the relevant details; results reflect what the file itself exposes.

ANALYZE · APK MALWARE RISK ANALYZER

Accepts: .APK · up to 1 GB

Official.Trump.2020.App_v2.3.0_apkpure.com.apk

29.6 MB

Analyze

Done.

Malware scan complete — 2 to review.

WARN **YARA: Dynamic code loading**

The app can load code at runtime (DexClassLoader / reflection). Legitimate for plugins, but it's also how malware hides payloads — review what's being loaded.

WARN **YARA: SMS-sending code strings**

SMS-sending API references (sendMessage) were found in the code. Check the manifest permissions separately — SMS sending is abused by toll-fraud malware, so confirm it is expected.

INFO **ClamAV: no known-malware signature**

No signature in ClamAV's database matched. This is not a guarantee the file is safe — signature scanning only catches known malware. Malware signatures last updated 2026-07-10.

INFO **YARA: Root-related strings**

References to root (su/busybox/Superuser). Could be root-detection (defensive) or root-requiring behavior.

INFO **YARA: Cleartext http:// URL(s) embedded**

Plain-HTTP URLs were found. Traffic to these isn't encrypted.

INFO **YARA: Native code / process execution**

The app loads native libraries or runs processes (Runtime.exec). Normal for many apps; noted because native code isn't covered by source-level checks.

INFO **How to read this**

This combines ClamAV signature matching (known malware) with YARA heuristic indicators. A clean result means nothing known matched — it is not a guarantee of safety.

Deleted after your scan. Files you upload are processed on our servers over an encrypted connection, then removed by the next hourly cleanup after analysis finishes (long scans are protected while they run). We never share them, and need no account.

About APK Malware Risk Analyzer

Scan an APK for malware indicators and risky behavior using open-source engines — an honest risk read, not a single-vendor verdict.

APK Malware Risk Analyzer is part of APKLint's security & malware toolkit — Find risky behavior, trackers, and suspicious patterns. It's free to use and needs no account.

Your privacy is the default: files you upload are processed on our servers over an encrypted connection and permanently deleted by a scheduled hourly cleanup after analysis finishes, and never shared.

What APK Malware Risk Analyzer checks

- ✓ ClamAV signature scan of the package
- ✓ YARA indicator rules (packers, dynamic loading, SMS/telephony, overlays)
- ✓ Flags the matched indicators with a short explanation
- ✓ Honest 'indicator found' wording — never a blanket 'safe'

Good to know: Signature + heuristic indicators only. A clean result means no known signature matched, not a guarantee of safety.

When to use APK Malware Risk Analyzer

Best for

A plain-language 'is this APK safe to install' check for non-security users, backed by the same open-source malware engines.

Not the right tool for

Not an absolute safety guarantee, and not a developer-grade structural or vulnerability report.

What you get back

A simple risk read, signature matches and obviously risky behaviors, in everyday wording.

How it differs from related APKLint tools

It is the approachable face of the Malware Scanner: identical engine, simpler framing for people who just want a yes/no leaning.

Limitations

Known-malware detection is never proof of safety; a clean result means no known signatures matched.

How to use APK Malware Risk Analyzer

- 1 Choose your APK file** — Drop an .apk file onto the page, or click to select it from your device.
- 2 Send securely** — The file is uploaded over an encrypted connection to our analysis servers.
- 3 Read your report** — APKLint unpacks and inspects the package and lays out the results on screen.
- 4 Your file is removed** — It's deleted by an hourly cleanup job after analysis finishes.

Why use APKLint

Always free

Every tool is free with no login and no paywall. Reasonable file and input limits keep the free service stable.

No on-page ad banners

A clean, focused interface with no third-party ad banners cluttering your results.

Privacy-first

Files you upload are deleted by a scheduled hourly cleanup after analysis finishes, and never shared.

Open-source engines

Built on ClamAV signature scanning and YARA heuristic indicators.

No sign-up

Start immediately — no account, login, or email required.

Works anywhere

Runs in any modern browser, on desktop or mobile.

Frequently asked questions

What does APK Malware Risk Analyzer do?

Scan an APK for malware indicators and risky behavior using open-source engines — an honest risk read, not a single-vendor verdict.

Does a clean result mean it's safe?

No. It means no known ClamAV signature or YARA indicator matched. New or targeted malware can still evade signature scanning.

Is it free to use?

Yes. Every tool on APKLint is completely free, with no sign-up and no account.

How is my data handled?

Your uploaded file and its result are processed on our servers over an encrypted

connection, then removed by the next hourly cleanup after analysis finishes. We never share them.

What files can I send?

An Android APK — a .apk file — up to 1 GB.
