APK & AAB ANALYSIS

APK Scanner Online

Inspect the contents of an APK — files, manifest, permissions, and signing — in a single upload.

APK Scanner Online is part of APKLint, an online toolkit for inspecting Android APK files. Inspect the contents of an APK — files, manifest, permissions, and signing — in a single upload. Upload an APK in your browser to view the relevant details; results reflect what the file itself exposes.

ANALYZE · APK SCANNER ONLINE

Analyze

Done.

Risk snapshot for com.ucampaignapp.americafirst v2.3.0 — 1 high-severity issue and 6 warnings.

ERROR **Exported content provider without permission**

Content provider "com.facebook.FacebookContentProvider" is exported and has no android:permission. This can expose your app's data to any other app. Set android:exported="false", or guard it with read/write permissions.

WARN **Exported activity without permission**

<activity> "com.facebook.CustomTabActivity" is exported (exported="true", or it has an intent-filter) and has no android:permission, so any app can trigger it. Add a permission, or set exported="false" if it shouldn't be public.

WARN **Exported receiver without permission**

<receiver> "io.branch.referral.InstallListener" is exported (exported="true", or it has an intent-filter) and has no android:permission, so any app can trigger it. Add a permission, or set exported="false" if it shouldn't be public.

WARN **Exported receiver without permission**

<receiver> "com.phunware.engagement.internal.receiver.RebootReceiver" is exported (exported="true", or it has an intent-filter) and has no android:permission, so any app can trigger it. Add a permission, or set exported="false" if it shouldn't be public.

WARN **Exported receiver without permission**

<receiver>
"com.phunware.engagement.internal.receiver.SignificantLocationUpdateReceiver" is exported (exported="true", or it has an intent-filter) and has no android:permission, so any app can trigger it. Add a permission, or set exported="false" if it shouldn't be public.

WARN **High-risk permission: ACCESS_BACKGROUND_LOCATION**

android.permission.ACCESS_BACKGROUND_LOCATION is a sensitive permission Google Play scrutinizes closely. Make sure you have a genuine, declared use and complete any required Play Console declaration — otherwise it can get the app rejected.

WARN **targetSdkVersion is below Google Play's API 35 target rule (reviewed 2026-06-27)**

targetSdkVersion is 28. As of 2026-06-27, Google Play required new apps and

updates to target at least API 35 (Android 15) — Wear OS, Android TV, and Automotive have separate timelines. Play requirements change over time, so verify the current target-API rule in the Play Console before release. A lower target also misses newer security and privacy defaults.

INFO App

Trump 2020 · package com.ucampaignapp.americafirst

INFO Version

versionName 2.3.0 (versionCode 302070)

INFO Network security config present

A network security config is referenced (@7F140001). Good — confirm it disables cleartext and limits trusted CAs as you intend (you can paste it into the Network Security Config checker).

INFO Launcher activity is exported (expected)

<activity>

"com.donaldjtrump.android.presentation.feature.onboarding.LaunchActivity" is your launcher entry point, so it is meant to be exported. No action needed — this is normal for the activity that opens from the home screen.

INFO receiver relies on default exported

<receiver>

"com.phunware.engagement.internal.receiver.SignificantLocationUpdateReceiver" has an intent-filter but doesn't declare android:exported. Android 12+ (targetSdk 31+) requires it to be explicit — set it true or false.

INFO 7 runtime permission(s) requested

The app requests runtime ("dangerous") permissions:

ACCESS_BACKGROUND_LOCATION, ACCESS_COARSE_LOCATION, ACCESS_FINE_LOCATION, READ_CONTACTS, READ_EXTERNAL_STORAGE, READ_PHONE_STATE, WRITE_EXTERNAL_STORAGE. Each prompts the user and should map to a real feature — remove any you don't need.

INFO minSdkVersion

minSdkVersion is 23. That's a reasonable floor for a modern app.

INFO 14 permission(s) requested

- android.permission.ACCESS_BACKGROUND_LOCATION
- android.permission.ACCESS_COARSE_LOCATION
- android.permission.ACCESS_FINE_LOCATION
- android.permission.ACCESS_NETWORK_STATE
- android.permission.ACCESS_WIFI_STATE
- android.permission.INTERNET
- android.permission.READ_CONTACTS
- android.permission.READ_EXTERNAL_STORAGE
- android.permission.READ_PHONE_STATE

- android.permission.RECEIVE_BOOT_COMPLETED
- android.permission.WAKE_LOCK
- android.permission.WRITE_EXTERNAL_STORAGE
- com.google.android.c2dm.permission.RECEIVE
- com.google.android.finsky.permission.BIND_GET_INSTALL_REFERRER_SERVICE

INFO**7 of them are runtime ("dangerous") permissions**

ACCESS_BACKGROUND_LOCATION, ACCESS_COARSE_LOCATION,
ACCESS_FINE_LOCATION, READ_CONTACTS, READ_EXTERNAL_STORAGE,
READ_PHONE_STATE, WRITE_EXTERNAL_STORAGE

Deleted after your scan. Files you upload are processed on our servers over an encrypted connection, then removed by the next hourly cleanup after analysis finishes (long scans are protected while they run). We never share them, and need no account.

About APK Scanner Online

Inspect the contents of an APK — files, manifest, permissions, and signing — in a single upload.

APK Scanner Online is part of APKLint's apk & aab analysis toolkit — Unpack, inspect, and break down Android packages. It's free to use and needs no account.

Your privacy is the default: files you upload are processed on our servers over an encrypted connection and permanently deleted by a scheduled hourly cleanup after analysis finishes, and never shared.

What APK Scanner Online checks

- ✓ Manifest red flags (debuggable, cleartext, exported components)
- ✓ Dangerous runtime permissions requested
- ✓ A compact, issues-first risk snapshot
- ✓ Package and version identity

Good to know: A lightweight snapshot — for a deeper malware/secret scan use the

Security Scanner or Malware Scanner.

When to use APK Scanner Online

Best for

Seeing what is actually inside an APK as an archive: the file tree, the manifest, permissions, and signing, when you want to browse contents rather than read a scored report.

Not the right tool for

Not a malware scanner despite the name, and not a code decompiler. For malware use the Malware Scanner; for source use the APK Decompiler.

What you get back

A contents-first view: entries in the package, the decoded manifest, permission declarations, and the signing block.

How it differs from related APKLint tools

APK Scanner leans on 'show me the contents', while APK Analyzer leans on 'measure and summarize' and Android App Scanner leans on security flags.

Limitations

Listing contents is not the same as judging them; pair it with the Security Scanner if risk is your question.

How to use APK Scanner Online

- 1 Choose your APK file** — Drop an .apk file onto the page, or click to select it from your device.
- 2 Send securely** — The file is uploaded over an encrypted connection to our

analysis servers.

- 3 **Read your report** — APKLint unpacks and inspects the package and lays out the results on screen.
- 4 **Your file is removed** — It's deleted by an hourly cleanup job after analysis finishes.

Why use APKLint

Always free

Every tool is free with no login and no paywall. Reasonable file and input limits keep the free service stable.

No on-page ad banners

A clean, focused interface with no third-party ad banners cluttering your results.

Privacy-first

Files you upload are deleted by a scheduled hourly cleanup after analysis finishes, and never shared.

Open-source engines

Built on androguard for APK parsing and manifest/certificate analysis.

No sign-up

Start immediately — no account, login, or email required.

Works anywhere

Runs in any modern browser, on desktop or mobile.

Frequently asked questions

What does APK Scanner Online do?

Inspect the contents of an APK — files, manifest, permissions, and signing — in a single upload.

Is this a malware scanner?

No. APK Scanner is a quick risk snapshot from the manifest and permissions. For ClamAV/YARA signature scanning use the APK Malware Scanner.

Is it free to use?

Yes. Every tool on APKLint is completely free, with no sign-up and no account.

How is my data handled?

Your uploaded file and its result are processed on our servers over an encrypted connection, then removed by the next hourly cleanup after analysis finishes. We never share them.

What files can I send?

An Android APK — a .apk file — up to 1 GB.
