SECURITY & MALWARE

APK Suspicious Behavior Scanner

Surface suspicious behaviors in an APK — risky API combinations, permissions, and patterns worth a closer look.

APK Suspicious Behavior Scanner is part of APKLint, an online toolkit for inspecting Android APK files. Surface suspicious behaviors in an APK — risky API combinations, permissions, and patterns worth a closer look. Upload an APK in your browser to view the relevant details; results reflect what the file itself exposes.

Analyze

Done.

Malware scan complete — 3 to review.

WARN **YARA: Dynamic code loading**

The app can load code at runtime (DexClassLoader / reflection). Legitimate for plugins, but it's also how malware hides payloads — review what's being loaded.

WARN **YARA: SMS-sending code strings**

SMS-sending API references (sendMessage) were found in the code. Check the manifest permissions separately — SMS sending is abused by toll-fraud malware, so confirm it is expected.

WARN **High-risk permissions requested**

- READ_CONTACTS — Read contacts
- READ_PHONE_STATE — Read phone state and device identifiers
- RECEIVE_BOOT_COMPLETED — Auto-start on boot — persistence

These permissions are commonly abused by malware. They aren't proof of malice — plenty of legitimate apps use some of them — but they're worth scrutiny alongside the signature and heuristic results.

INFO **ClamAV: no known-malware signature**

No signature in ClamAV's database matched. This is not a guarantee the file is safe — signature scanning only catches known malware. Malware signatures last updated 2026-07-10.

INFO **YARA: Root-related strings**

References to root (su/busybox/Superuser). Could be root-detection (defensive) or root-requiring behavior.

INFO **YARA: Cleartext http:// URL(s) embedded**

Plain-HTTP URLs were found. Traffic to these isn't encrypted.

INFO **YARA: Native code / process execution**

The app loads native libraries or runs processes (Runtime.exec). Normal for many apps; noted because native code isn't covered by source-level checks.

INFO **How to read this**

This combines ClamAV signature matching (known malware) with YARA heuristic indicators. A clean result means nothing known matched — it is not a guarantee of safety.

Deleted after your scan. Files you upload are processed on our servers over an encrypted connection, then removed by the next hourly cleanup after analysis finishes (long scans are protected while they run). We never share them, and need no account.

About APK Suspicious Behavior Scanner

Surface suspicious behaviors in an APK — risky API combinations, permissions, and patterns worth a closer look.

APK Suspicious Behavior Scanner is part of APKLint's security & malware toolkit — Find risky behavior, trackers, and suspicious patterns. It's free to use and needs no account.

Your privacy is the default: files you upload are processed on our servers over an encrypted connection and permanently deleted by a scheduled hourly cleanup after analysis finishes, and never shared.

What APK Suspicious Behavior Scanner checks

- ✓ Suspicious API/string combinations via YARA
- ✓ Packer and obfuscation indicators
- ✓ Risky behaviors: dynamic code loading, accessibility abuse, overlays
- ✓ ClamAV signature match where available

Good to know: Surfaces behaviors worth a closer look; it doesn't deliver a malware verdict.

When to use APK Suspicious Behavior Scanner

Best for

Surfacing suspicious behavior in an APK, risky API combinations, dangerous permission clusters, and known-bad patterns, when you want a behavior-and-signature read.

Not the right tool for

Not a guarantee of safety and not a structural breakdown; treat a clean result as 'no known indicators', not 'proven safe'.

What you get back

Flagged suspicious behaviors and a signature/heuristic read (including ClamAV/YARA where relevant), with the matched indicators.

How it differs from related APKLint tools

APK Virus Scanner is the same engine in plainer 'is it a virus' language; this page leans into behavioral indicators and is aimed at a more technical reader.

Limitations

Signature and heuristic scanning only catches known malware and patterns; pair it with Google Play Protect for a definitive check.

How to use APK Suspicious Behavior Scanner

- 1 Choose your APK file** — Drop an .apk file onto the page, or click to select it from your device.
- 2 Send securely** — The file is uploaded over an encrypted connection to our analysis servers.
- 3 Read your report** — APKLint unpacks and inspects the package and lays out the results on screen.
- 4 Your file is removed** — It's deleted by an hourly cleanup job after analysis finishes.

Why use APKLint

Always free

Every tool is free with no login and no paywall. Reasonable file and input limits keep the free service stable.

No on-page ad banners

A clean, focused interface with no third-party ad banners cluttering your results.

Privacy-first

Files you upload are deleted by a scheduled hourly cleanup after analysis finishes, and never shared.

Open-source engines

Built on ClamAV signature scanning, YARA heuristic indicators, and an androguard manifest-permission check.

No sign-up

Start immediately — no account, login, or email required.

Works anywhere

Runs in any modern browser, on desktop or mobile.

Frequently asked questions

What does APK Suspicious Behavior Scanner do?

Surface suspicious behaviors in an APK — risky API combinations, permissions, and patterns worth a closer look.

What's the difference from the Virus Scanner?

They share the engine but this view leads with behavioral indicators (risky API patterns), while the Virus Scanner leads with signature matches.

Is it free to use?

Yes. Every tool on APKLint is completely free, with no sign-up and no account.

How is my data handled?

Your uploaded file and its result are processed on our servers over an encrypted connection, then removed by the next hourly cleanup after analysis finishes. We never share them.

What files can I send?

An Android APK — a .apk file — up to 1 GB.
