DECOMPILE & REVERSE ENGINEERING

ProGuard / R8 Obfuscation Checker

Check whether an APK's code is obfuscated with ProGuard or R8 and how thoroughly, from the ratio of readable to short machine-style class and package names.

ProGuard / R8 Obfuscation Checker is part of APKLint, an online toolkit for inspecting Android APK files. Check whether an APK's code is obfuscated with ProGuard or R8 and how thoroughly, from the ratio of readable to short machine-style class and package names. Upload an APK in your browser to view the relevant details; results reflect what the file itself exposes.

ANALYZE · PROGUARD / R8 OBFUSCATION CHECKER

Analyze

Done.

Decompiled Official.Trump.2020.App_v2.3.0_apkpure.com.apk successfully.

INFO Native Android app

No cross-platform framework detected — this looks like a standard Java/Kotlin Android app.

INFO jadx — Java source recovered

5724 .java files across ~568 packages (57.6 MB of source).

INFO Obfuscation name ratio

1,394 of 2,564 package-name segments are 1–2 characters (54%). A high share suggests ProGuard/R8 name obfuscation.

INFO Looks obfuscated

Most package/class names are 1–2 letters — the app appears to have been run through ProGuard/R8 obfuscation. That's good for release hardening.

INFO apktool — smali + resources decoded

10313 .smali files and 739 decoded resource XML files (86.0 MB). The real AndroidManifest.xml is decoded here too.

INFO Download ready

Your decompiled output is ready below. Download it soon — result files are cleared by the hourly cleanup job.

↓ [jadx-sources.zip](#) **26.2 MB**

↓ [apktool-output.zip](#) **28.2 MB**

Deleted after your scan. Files you upload are processed on our servers over an encrypted connection, then removed by the next hourly cleanup after analysis finishes (long scans are protected while they run). We never share them, and need no account.

About ProGuard / R8 Obfuscation Checker

Check whether an APK's code is obfuscated with ProGuard or R8 and how thoroughly, from the ratio of readable to short machine-style class and package names.

ProGuard / R8 Obfuscation Checker is part of APKLint's decompile & reverse engineering toolkit — Turn a built app back into readable code and resources. It's free to use and needs no account.

Your privacy is the default: files you upload are processed on our servers over an encrypted connection and permanently deleted by a scheduled hourly cleanup after analysis finishes, and never shared.

What ProGuard / R8 Obfuscation Checker checks

- ✓ Estimates how much of the code is name-obfuscated
- ✓ Flags short, machine-style class and package names (a, b, c...)
- ✓ Reports the ratio of readable vs obfuscated identifiers
- ✓ Tells you whether R8/ProGuard appears to have run

Good to know: This is a heuristic read of obfuscation strength, not proof a mapping file exists or that secrets are hidden.

When to use ProGuard / R8 Obfuscation Checker

Best for

Judging how obfuscated an APK is, how much of the code is name-mangled by ProGuard/R8, before you attempt to read or decompile it.

Not the right tool for

Not a decompiler itself and not proof that secrets are hidden; it measures obfuscation, it does not extract code.

What you get back

A heuristic obfuscation read: the share of short/renamed identifiers and signs of shrinking/renaming.

How it differs from related APKLint tools

The decompile tools try to recover code; this one tells you in advance how hard that will be on a given APK.

Limitations

A heuristic estimate of name-obfuscation strength, not a guarantee about mapping files or hidden data.

How to use ProGuard / R8 Obfuscation Checker

- 1 **Choose your APK file** — Drop an .apk file onto the page, or click to select it from your device.
- 2 **Send securely** — The file is uploaded over an encrypted connection to our analysis servers.
- 3 **Read your report** — APKLint unpacks and inspects the package and lays out the results on screen.
- 4 **Your file is removed** — It's deleted by an hourly cleanup job after analysis finishes.

Why use APKLint

Always free

Every tool is free with no login and no paywall. Reasonable file and input limits keep the free service stable.

No on-page ad banners

A clean, focused interface with no third-party ad banners cluttering your results.

Privacy-first

Files you upload are deleted by a scheduled hourly cleanup after analysis finishes, and never shared.

Open-source engines

Built on jadx and apktool for decompiling and disassembly.

No sign-up

Start immediately — no account, login, or email required.

Works anywhere

Runs in any modern browser, on desktop or mobile.

Frequently asked questions

What does ProGuard / R8 Obfuscation Checker do?

Check whether an APK's code is obfuscated with ProGuard or R8 and how thoroughly, from the ratio of readable to short machine-style class and package names.

Why does obfuscation matter?

Obfuscation makes reverse-engineering harder and is recommended for release builds. Low obfuscation means your code is easy to read after decompiling.

Is it free to use?

Yes. Every tool on APKLint is completely free, with no sign-up and no account.

How is my data handled?

Your uploaded file and its result are processed on our servers over an encrypted connection, then removed by the next hourly cleanup after analysis finishes. We never share them.

What files can I send?

An Android APK — a .apk file — up to 1 GB.
