MULTI-FORMAT

Upload APK, XAPK, or APKS for Analysis

Drop your file to run APK analysis for manifest structure, permissions, components, and

security scan indicators. Files are removed after processing.

Upload APK File

Drag and drop your file here, or click to browse. We process files securely and delete them after analysis.

Choose File

MAX 100MB

APK / XAPK / APKS

APK Manifest & Component Analysis

Inspect package structure, requested permissions, Android components, native libraries, and hardware features. View `AndroidManifest.xml` data in a readable format.

Fast APK Metadata Parsing

Built for fast backend parsing. Get accurate version details, Min/Target SDK levels, and MD5/SHA hash fingerprints without browser lag.

APK Security Scan Signals

We check file hashes against multi-engine threat intelligence and combine results with permission and network indicators to provide a practical APK security summary.

User-Friendly Interface

A clean, intuitive dashboard designed for efficiency. Quickly upload files via drag-and-drop and navigate through complex technical data with our organized, tab-free layout.

WHY USE THIS APK ANALYZER

Balanced technical and security insights for Android APK reviews.

100% Free

No sign-up, no trial limits.

Private by Default

Files are processed securely and removed after analysis.

Fast Results

Optimized backend parsing for quick output.

APK+

Supports APK, XAPK, and APKS formats.

What Is an APK File?

APK stands for Android Application Package. It bundles the files an Android app needs to run, including app code, resources, the manifest, and signing data. An APK analyzer helps you inspect this package before installation by showing permissions, components, SDK targets, hash values, and related security signals.

Analyze Android APK files with clear, structured results. Inspect package details, permissions, components, and security metadata in seconds.
