Image

Image Compressor

Shrink **photos** and **screenshots** for the web with **JPEG** or **WebP** quality control, optional **max-side downscaling**, and live **before/after file size** stats. Export **PNG** when you need lossless transparency (often larger for photos). Everything runs locally — your image never uploads to DroidXP.

**Drop image here**

or click to browse — PNG, JPG, WebP, ...

No image selected

Output format

JPEG — lossy, best for photos

JPEG flattens transparency on white. WebP may be unavailable in some browsers.

Max side (resize before encode)

Original dimensions

Downscales large images proportionally before compression (helps weight and speed).

Quality (JPEG / WebP)

82%

Disabled for PNG — PNG is lossless and ignores this slider.

**Download compressed**
