Check permissions, SDK requirements, densities, and more. Save a report if needed.

Understanding Android App Files

What is an APK File?

APK ([📄 Android Package Kit](#)) is the file format Android uses to install apps - similar to .exe on Windows. It bundles the compiled app code, resources, an `AndroidManifest.xml` declaring permissions and requirements, and digital certificates to verify the developer.

Web Browsers

What is an XAPK File?

XAPK is an extended package for larger apps. Google Play has a 150 MB APK limit, so large games bundle the main APK with extra OBB data files and optional split APKs into an XAPK. You need a special installer (like APKPure) to install it - Android cannot handle XAPK files directly.

Feature	APK	XAPK
Structure	Single file	Bundle of multiple files
Play Store size limit	150 MB	No practical limit
Installation	Direct on Android	Needs third-party installer
Best for	Most apps & utilities	Large games with extra data

Why Check an APK Before Installing?

Sideloaded apps from outside the Play Store carries risks. Always inspect an APK first and look for: **Computer Drives & Storage**

Suspicious permissions - Does a flashlight app need your contacts? That's a red flag.

Android version - Verify the minimum SDK matches your device.

Package name - Fakes often clone real names (e.g., `com.facebook.lite` vs `com.facebook.lite`).

Version code - A very low version code may indicate an outdated or tampered APK.

Common Permissions Explained

**INTERNET**

Connect to the internet. Almost all apps need this - generally safe.

Computer Science**CAMERA**

Access your camera. Fine for photo/video apps, suspicious otherwise.

**READ_CONTACTS**

Read your full contact list. A common data-harvesting permission.

**ACCESS_FINE_LOCATION**

Get your precise GPS position. Only justified for navigation apps.

**READ_SMS**

Read all text messages. Very sensitive - few apps legitimately need this.

**WRITE_EXTERNAL_STORAGE**

Create or modify files on your storage. Normal for media apps.
