

zstdcat (1)

Compress or decompress .zst files

Other Alias

zstd, unzstd

SYNOPSIS

zstd [**OPTIONS**] [-|INPUT-FILE] <OUTPUT-FILE>

unzstd is equivalent to **zstd -d**

zstdcat is equivalent to **zstd -dc**

DESCRIPTION

zstd is a fast lossless compression algorithm. It is based on the **LZ77** family, with FSE & huff0 entropy stage. zstd offers compression speed > 200 MB/s per core. It also features a fast decoder, with speed > 500 MB/s per core.

zstd command line is generally similar to gzip, but features the following differences :

- Original files are preserved

- By default, **zstd file1 file2** means : compress file1 **into** file2.

Use **-m** command if you want : compress file1 into file1.zstd and file2 into file2.zst

-

By default, when compressing files, **zstd** displays advancement notification and result summary

Use **-q** to turn them off

zstd supports the following options :

OPTIONS

-#
