Multithreading Library for [Brotli](#), [Lizard](#), [LZ4](#), [LZ5](#), [Snappy-c](#), [LZFSE](#) and [Zstandard](#)

Description

- works with skippables frame id 0x184D2A50 (12 bytes per compressed frame)
- brotli is supported the same way, it will encapsulate the real brotli stream within an 16 byte frame header

Generic skippable frame definition

- the frame header for [Lizard](#), [LZ4](#), [LZ5](#) and [Zstandard](#) is like this:

size	value	description
4 bytes	0x184D2A50U	magic for skippable frame
4 bytes	4	size of skippable frame
4 bytes	compressed size	size of the following frame (compressed data)

Brotli frame definition

- the frame header for brotli is defined a bit different:

size	value	description
4 bytes	0x184D2A50U	magic for skippable frame (like zstd)
4 bytes	8	size of skippable frame
4 bytes	compressed size	size of the following frame (compressed data)
2 bytes	0x5242U	magic for brotli "BR"
2 bytes	uncompressed size	allocation hint for decompressor (64KB * this size)

Snappy-c frame definition

- the frame header for Snappy-c is defined a bit different:

size	value	description
4 bytes	0x184D2A50U	magic for skippable frame (like zstd)
4 bytes	8	size of skippable frame
4 bytes	compressed size	size of the following frame (compressed data)
2 bytes	0x5053U	magic for Snappy-c "SP"
2 bytes	uncompressed size	allocation hint for decompressor (64KB * this size)

LZFSE frame definition

- the frame header for Lzfse is defined a bit different:

size	value	description
4 bytes	0x184D2A50U	magic for skippable frame (like zstd)
4 bytes	8	size of skippable frame
4 bytes	compressed size	size of the following frame (compressed data)
2 bytes	0x464CU	magic for Lzfse "LF"

size	value	description
2 bytes	uncompressed size	allocation hint for decompressor (64KB * this size)

Usage of the Testutils

- see [programs](#)

Usage of the Library

- see [lib](#)
