Zstandard - Real-time data compression algorithm

To solve this situation, **Zstd** offers a training mode, which can be used to tune the algorithm for a selected type of data. Training **Zstandard** is achieved by provide it with a few samples (one file per sample). The result of this training is stored in a file called "dictionary", which must be loaded before...

zstd - Wikipedia

Zstd is the corresponding reference implementation in C, released as open-source software on 31 August 2016. [3][4] The algorithm was published in 2018 as RFC 8478, which also defines an associated media type "application/**zstd**", filename extension ".zst", and HTTP content encoding "**zstd**".
