These are results for **macbook *battery* charger is disabled**

Search instead for **macbook batter charger is disabled**

◆ AI Overview

When your MacBook says the charger is disabled or "Not Charging," it usually means **macOS has paused charging to preserve battery health, or there is an issue with your power delivery hardware**.  Apple Support +1

Here are the most effective ways to troubleshoot this issue:

- **Turn Off Optimized Battery Charging:** macOS may pause charging at 80% if your device learns your daily routine. Go to **Apple Menu > System Settings > Battery**, click **Battery Health**, and toggle off **Optimized Battery Charging** or **Manage Battery Usage**.  Apple Support +3
- **Check Wattage and Ports:** MacBooks require specific minimum wattages and may disable charging if connected to a low-output power brick or hub. Try plugging the original Apple power adapter directly into the wall. If your Mac has multiple USB-C ports, try a different port.  Reddit +4
- **Clean the Ports and Cable:** Debris inside the MagSafe or USB-C port can block power transfer. Carefully inspect the pins and use a dry, lint-free cloth or a non-metallic tool to gently clean the connectors.  Anker +3
- **Reset the SMC or Restart:** For Intel-based Macs, resetting the SMC (System Management Controller) can resolve charging glitches. For Apple Silicon (M1/M2/M3/M4) Macs, a simple full restart accomplishes this.  Anker
- **Check Battery Condition:** If your battery is heavily degraded, the system may block charging. Navigate to **System Settings > Battery** to see if it displays "**Service Recommended**".  Reddit +2

If you would like, please tell me:

- What **MacBook model/year** do you have?
- What **icon** is currently showing on your battery menu (a plug, a lightning bolt, or an alert)?
- Is the charger **plugged directly into a wall outlet** or a power strip?

I can give you more specific steps to get your device back up and running.
