AI Overview

A **USB Rubber Ducky** is a keystroke injection tool created by [Hak5](#). Disguised as an ordinary flash drive, it actually emulates a USB keyboard. When plugged in, it instantly types pre-programmed scripts (Ducky Script) at superhuman speeds, making it a powerful physical hacking and penetration testing device. Hak5 +4

How It Works

- **The "Keyboard" Loophole:** Computers inherently trust connected keyboards and mouse devices (Human Interface Devices). Because the Ducky identifies as a keyboard, operating systems automatically accept its commands without scanning it for traditional malware. Plurilock +2
- **Ducky Script:** This is the simple macro scripting language used to program the device. Users can write basic lines to delay, hit keys, open terminal/PowerShell, or run complex commands at speeds exceeding 1,000 words per minute. Lab401 +3
- **Rapid Execution:** In under 10 seconds, a Rubber Ducky can install covert backdoors, modify network settings, or exfiltrate sensitive documents directly to the cloud. YouTube · ThreatLocker +2

Use Cases

- **Penetration Testing:** Ethical hackers and security professionals use it to test endpoint defenses and evaluate how easily a system can be compromised via physical access. Plurilock +2
- **Automation:** IT administrators use it to quickly deploy system configurations or automate repetitive workflows across new machines. YouTube · Linus Tech Tips +1
- **Malicious Attacks:** Because of its capabilities, it is frequently used by malicious actors who gain brief, unauthorized physical access to a machine to steal credentials or implant ransomware. Plurilock +2

How to Protect Your Devices

- **Endpoint Detection:** Use advanced endpoint detection and response (EDR) software capable of spotting anomalous behavior and blocking unauthorized PowerShell or terminal actions.  YouTube · ThreatLocker
- **Physical Security:** Always lock your computer when stepping away from your desk, and restrict visitor, contractor, or unmonitored access to workstations.  Plurilock
- **Device Control:** Implement strict policies preventing unauthorized USB devices from registering as Human Interface Devices.

If you are looking to learn more about the technical ecosystem, programming payloads, or purchasing a device, check out the official Hak5 Rubber Ducky page or the [Lab401](#) hardware store.  Hak5 +1
