How to setup a literally free CDN

`cdn.md`

How to setup a literally free CDN

1. Create repo on GitHub where you'll put your files.
2. Use [jsDeliver](#) or [statically](#) to get your assets.

Here is repo I'm using:

<https://github.com/jcubic/static>

And links to files look like this:

- <https://cdn.statically.io/gh/jcubic/static/master/js/lzjb.js>
- <https://cdn.jsdelivr.net/gh/jcubic/static@master/js/lzjb.js>

Add githack: <https://raw.githack.com/>

proudparrot2 commented on May 9, 2023

Add gitloaf: <https://gitloaf.com>

lopugit commented on Jan 11, 2024

Wow this is so cool 🎉👏🚀👤

lopugit commented on Jan 11, 2024

Would be great if there was a way to do cache busted @latest..

jcubic commented on Jan 11, 2024 • edited ▼

@lopugit there is an option to purge the URL for jsDelivr, but it doesn't work all the time. Just Replace the "cdn" with "purge".

You can try to add a GitHub action that will purge the URL. But it may break, it's better to do this manually. There is also an option to use git commit hash so you will always have the latest version.

lopugit commented on Feb 12, 2024

@jcubic oh awesome! 🙌

Man, thank you so much for making this gist, this github -> cdn thing has helped me so much, if you use babel standalone, you can basically create full React typescript apps and make them embeddable using just `<script src , combined with importing esm modules via esm cdn, it's incredible`

```
await loadScript("https://unpkg.com/@babel/standalone/babel.min.js", "text/javascript")

await loadScript({ content: `

import React from "https://esm.sh/react@18";
window.React = React
```

Take a look here for example.

<https://github.com/lopugit/mods/blob/v1.0.16/maccas.js>

@lopugit I don't understand what your code is supposed to do, but I'm glad that you find my gist useful.

lopugit commented on Feb 12, 2024

@jcubic 🤔 🙌 100 🚀 👍

Mugane commented on Jun 21, 2024

Is it actually free though? Isn't Github (or whoever) paying for the service? Isn't this a violation of their terms of use?

jcubic commented on Jun 21, 2024

Author

@Mugane Sorry I'm not a lawyer. But this has nothing to do with GitHub, JSDelivr is donated to the public, all services give the service are donated to community. JSDelivr don't pay the Cloudflare bill.

Mugane commented on Jun 21, 2024

Ah, yes you are right. Neat!

ethanpil commented on Jul 21, 2025

FYI - do the same for Gists using this service: <https://www.gisthostfor.me/>

jcubic commented on Jul 21, 2025

Author

@ethanpil thanks, but it's not exactly the same since you need to manually publish the files.

GoldenFish23 commented on Jul 8

Wow its good, giving the trial.
