

Open Health Stack

Open Health Stack...

Accelerate the future of digital health

Open Health Stack provides building blocks for creating next-gen healthcare apps. These components save time and make it easier to adopt modern healthcare standards (HL7® FHIR®), leading to secure, offline-capable, data-driven solutions for healthcare workers.

Firebase is an app development platform that provides integrated tools to help you build, grow and monetize your apps. The Firebase SDK enables access to the Firebase services in an intuitive and idiomatic manner on several platforms.

Dart is an approachable, portable, and productive language for high-quality apps on any platform.

Flutter is an open source framework for building beautiful, natively compiled, multi-platform applications from a single codebase.

Android is an operating system and software stack created for an array of devices with different form factors, including phones, tablets, wearables, TVs, automobiles, and connected devices. The primary purposes of Android are to create an open platform available for carriers, OEMs, and developers to make their ideas a reality and to provide a successful, real-world product that improves the mobile experience for users.
