◆ AI Overview

To download all RFCs, use the official **rsync** service provided by the RFC Editor [Download RFCs](#). It is the most efficient way to mirror the entire repository instead of downloading them one by one. [🔗](#)

Run the following command in your terminal to mirror the text-only versions to a local directory:

```
rsync -avz --delete rsync.rfc-editor.org::rfcs-text-only rfc-mirror-directory 🔗
```

For other formats (like PDF or JSON), replace `rfcs-text-only` with one of the following module names:

- `rfcs-pdf-all` (All PDFs)
- `rfcs-json-only` (Only JSON files)
- `rfc-ed-all` (Entire repository) [🔗](#)

Alternatively, if you prefer downloading bulk archives, you can grab them as `.tar.gz` or `.zip` directly from the [IETF Datatracker Index](#).

If you'd like, let me know:

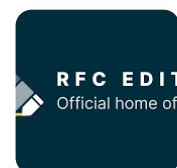

- What **formats** you are looking to download (text, PDF, or JSON)
- If you need help writing a **script to parse or search** through the downloaded files locally

I can help you build the right automation for your project.
